About Infodation

Infodation is a software development company headquartered in the Netherlands, with a development center in Nha Trang, Vietnam. For more than 17 years, we have built and operated software platforms for leading companies in Europe and the US across telecom, energy, logistics and manufacturing.

Infodation's **R&D department and Dedicated AI Team** focus on design automation for engineering and construction, built on the **Autodesk** and **Bentley** platforms.

17+	2	ISO 27001	Autodesk
years serving the European market	offices — Netherlands & Vietnam	certified by TÜV NORD	& Bentley Developer Network

02 / 05

Problems we solve

Design and construction still involve a great deal of repetitive, time-consuming and error-prone work. Infodation combines AI with the **Autodesk** (AutoCAD, Revit) and **Bentley** (MicroStation) platforms to automate it.

01
Redline markup processing

Automatically apply redline changes from drawings to the **Revit** model.

02
Technical document analysis

Extract and cross-check information across drawings, specifications and project documents.

03
Quantity takeoff

Extract quantities from CAD drawings into the client's own bill of quantities template.

04
2D-to-3D model generation

Digitize 2D architectural and structural drawings to automatically build 3D models for presentation and video rendering.

BUILT TO YOUR STANDARDS Every solution is tailored to the client's own drawing conventions, templates and workflows.

03 / 05

How we work

We do not sell off-the-shelf packages. Every engagement starts by understanding the problem and measuring results on the client's own data.

01
Discovery
1–2 WEEKS
Understand the current workflow; measure time and errors as a baseline.

02
Pilot
3–4 WEEKS
Test on the client's sample drawings against agreed success criteria.

03
Rollout
PER SCOPE
Finalize, integrate into the workflow, train and support.

Pilot results are measured on the client's own data, against the baseline set during Discovery.

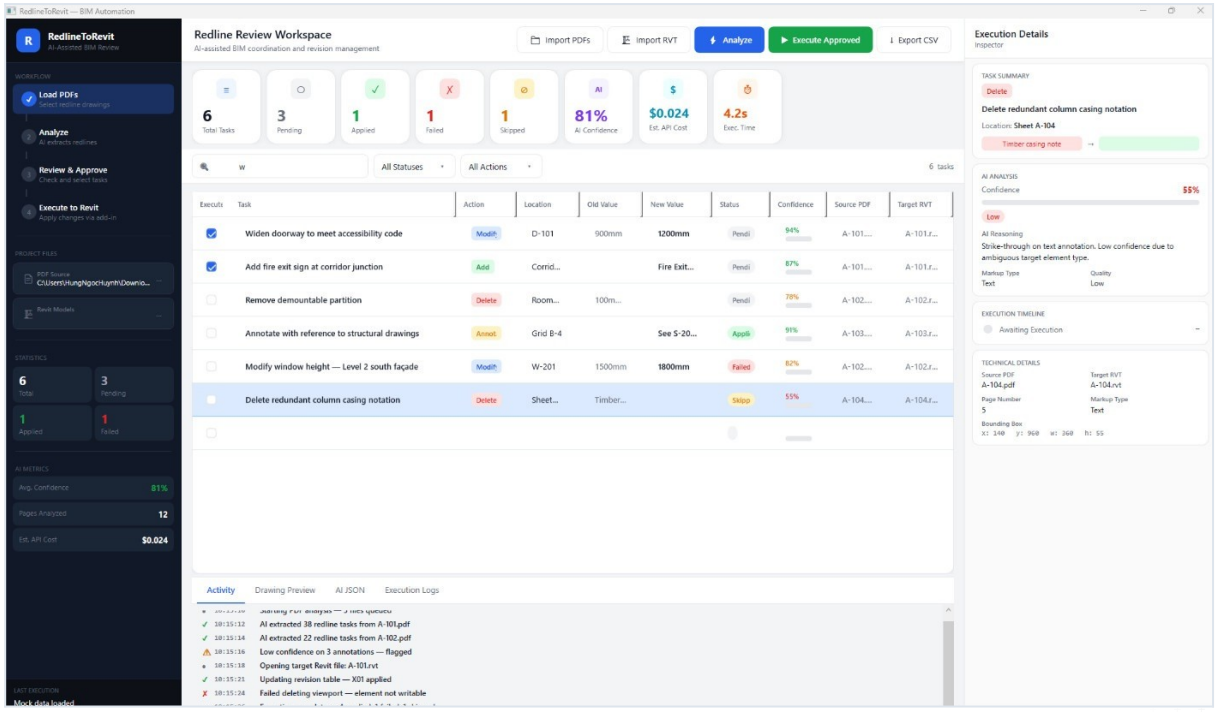

IMPACT

40–60%
less time on review, approval & modeling

2D → 3D
automated modeling in Revit & AutoCAD

Auto
RedLine markup of design errors

SOLUTION PREVIEW

Illustrative interface: AI reads redlines from PDF drawings, proposes changes with a confidence score for engineer review, then updates the Revit model.

04 / 05

Track record

Infodation's drawing automation is being delivered on Revit, AutoCAD and MicroStation, on real client data and workflows.

FDI company, construction & industry

IN DELIVERY

The engagement covers three use cases:

- **Redline markup processing** on drawings (Cat 2, Cat 3).
- **Technical document analysis** of drawings receiving feedback from project owners, contractors and site conditions.
- **3D data digitization** of existing buildings whose drawings are outdated, incomplete or lost.

Large-scale CAD/BIM drafting company

IN DISCUSSION

Partnership discussions on **digitizing 2D structural drawings** to generate 3D models.

Partner names and specific results are shared only with their consent.

05 / 05

Data security

Your drawings are your assets. We protect them from the very first step.

ISO/IEC 27001:2022

Information security management system audited annually by TÜV NORD.

NDA first

A non-disclosure agreement is signed before we receive any drawing.

On-premise

On-premise deployment available; sample data deleted after the pilot on request.

INFODATION

INTEGRATED SOFTWARE SOLUTIONS

NEXT STEP

Start with 60 minutes.

A 60-minute conversation to understand your current workflow.

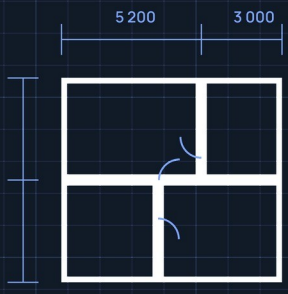

Infodation then sends a pilot proposal with scope, success criteria and cost.
